

When will solar power be available

Overview

In our January Short-Term Energy Outlook (STEO), which contains new forecast data through December 2025, we forecast new capacity will boost the solar share of total generation to 5. Yes, solar panels are still worth it for the vast majority of U. homeowners in 2026 and beyond, despite the end of the 30% federal solar tax credit for some systems. When. Note: Values for 2023 reflect historical data through October and estimates for November and December. China's National Energy Administration (NEA) released its 2025 power sector statistics on Jan. China's installed solar power capacity is projected to surpass coal-fired capacity for the first time this year, marking a major. We wrote this report because 2026 is not going to be business as usual for solar or for high efficiency HVAC. The federal credits that carried the residential market for a decade are being cut off at the end of 2025, and the new rules born out of OBBBA in mid 2025 do not treat homeowners and. If you invest in renewable energy for your home such as solar, wind, geothermal, fuel cells or battery storage technology, you may qualify for an annual residential clean energy tax credit.
