

# Which photovoltaic panels should be used in restaurants

## Overview

---

Depending on the monthly consumption, you will need between 30-40 panels for a 10kW system to 380-410 panels for a 100kW system. Quick-service restaurants (QSRs) are among the most energy-intensive in the United States. When buildings have the ability with solar panel rooftops to create their own electricity and store it, it can significantly reduce, if not potentially eliminate, food waste. With solar panel rooftops, restaurant owners and operators can not only create their electricity, but they can also store it for emergencies. This eliminates the concern of refrigeration going down and facing the prospect of increased food waste, which has a significantly positive effect on a. According to the National Restaurant Association, a typical restaurant uses approximately 38 kilowatt-hours (kWh) of electricity and 111 cubic feet of natural gas per square foot annually, resulting in thousands of dollars in monthly utility expenses that directly impact their bottom line. The answer is a resounding yes, and in this blog post, I'll delve into the details of how solar systems can be effectively employed in the restaurant industry, the benefits they bring, and some considerations for implementation. The absence of any negative impacts when generating electricity using solar panels is an indisputable advantage of such systems. Automation of work, high reliability and.
