

Wind and solar power generation on-site energy

Overview

On-site renewable generation refers to the production of clean and sustainable energy from renewable sources at or near the location where it is consumed. It involves setting up renewable energy systems like solar panels, wind turbines, or small-scale hydroelectric generators to generate. Onsite energy refers to electric and thermal energy generation and storage technologies that are physically located at a facility and provide alternative energy services directly to the site.

Wind and solar power generation on-site energy

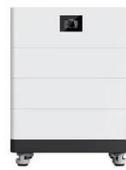

Produce renewable energy on-site

To help you switch to solar, BDC has put together a step-by-step guide. You will find all the information you need to select the right panels, customize your installations and make sure you keep the power ...
