

Wind power generation into accounting

Overview

Discover the 5 key issues in accounting for wind plants, including depreciation, revenue recognition, tax credits, maintenance, and environmental liabilities. Learn how effective accounting practices are crucial. Global installed wind generation capacity has surged from 7.5 GW in 1997 to an impressive 906 GW by 2023, playing a crucial role in decarbonizing power markets and facilitating sector electrification. Turbines have a useful life of about 25 years, while the blades don't last as long. International Financial Reporting Standards (IFRS) provide the basis for company reporting in an increasing number of countries around the world. The methodology chosen for these technologies is important as it affects the perception of the relative size of renewable source energy to fossil energy, affects estimates of source-based building energy. The unique accounting issues associated with the wind power industry.
