# Wind turbine generator status check

Overview

The USWTDB Viewer, created by the USGS Energy Resources Program, lets you visualize, inspect, interact, and download the most current USWTDB through a dynamic web application. The Global Wind Power Tracker (GWPT) is a worldwide dataset of utility-scale, on and offshore wind facilities. It includes wind farm phases with capacities of 10 megawatts (MW) or more. A wind project phase is generally defined as a group of one or more wind turbines that are installed under one. The United States Wind Turbine Database (USWTDB) provides the locations of land-based and offshore wind turbines in the United States, corresponding wind project information, and turbine technical specifications. The creation of this database was jointly funded by the U. Department of Energy. If your turbine tracking relies on spreadsheets with coordinate columns or maintenance logs that don't connect to maps, you're missing the spatial awareness that helps technicians locate equipment, plan efficient routes, and spot patterns in maintenance needs.

Wind turbine generator status check

Global Wind Power Tracker: Detailed Data on Wind Projects

Discover detailed data on wind energy projects with the Global Wind Power Tracker. Explore capacities, locations, and progress toward sustainable energy in Southeast Asia.
