Overview

Yemen's electricity sector faces significant challenges. From the suspension of Mareb power station from the national grid to the suspension of oil and gas production, Yemen remains among the world's lowest per capita electricity producers. Electricity can be generated in two main ways: by harnessing the heat from burning fuels or nuclear reactions in the form of steam (thermal power) or by capturing the energy of natural forces such as the sun, wind or moving water. The complexities of electricity generation, distribution. In the energy domain, there are many different units thrown around — joules, exajoules, million tonnes of oil equivalents, barrel equivalents, British thermal units, terawatt-hours, to name a few. This can be confusing, and make comparisons difficult. So at Our World in Data we try to maintain. How does 6Wresearch market report help businesses in making strategic decisions?

6Wresearch actively monitors the Yemen Electric Utilities Market and publishes its comprehensive annual report, highlighting emerging trends, growth drivers, revenue analysis, and forecast outlook. Primary energy use in Yemen was 87 TWh and 4 TWh/million people in 2008 and 88 TWh (4 TWh/M) in 2009. 1 The country's per capita electricity consumption stood at 243 kWh in 2013, almost one-sixth of the regional average.

Energy in Yemen

According to the World Bank, Yemen has the lowest level of electricity connection in the Middle East, with only 40% of the population having access to electricity. Rural areas are particularly badly affected. Industrial concerns, hospitals and hotels have their own back-up generators. To address these shortages, a 340-MW gas-fired power plant is under construction-and close to completion-at Marib. Further expansion to the facility, which will add an additional 400 MW of output, is planned. Yemen ha...
